

History during drawer opening — POLICY QUERY $t=0$

hist_length=12, stride=7 $\rightarrow$ frames 0-0 sampled every 7 steps; current observation $t=0$; success at $t=467$. A new 25-action chunk is generated from this input.

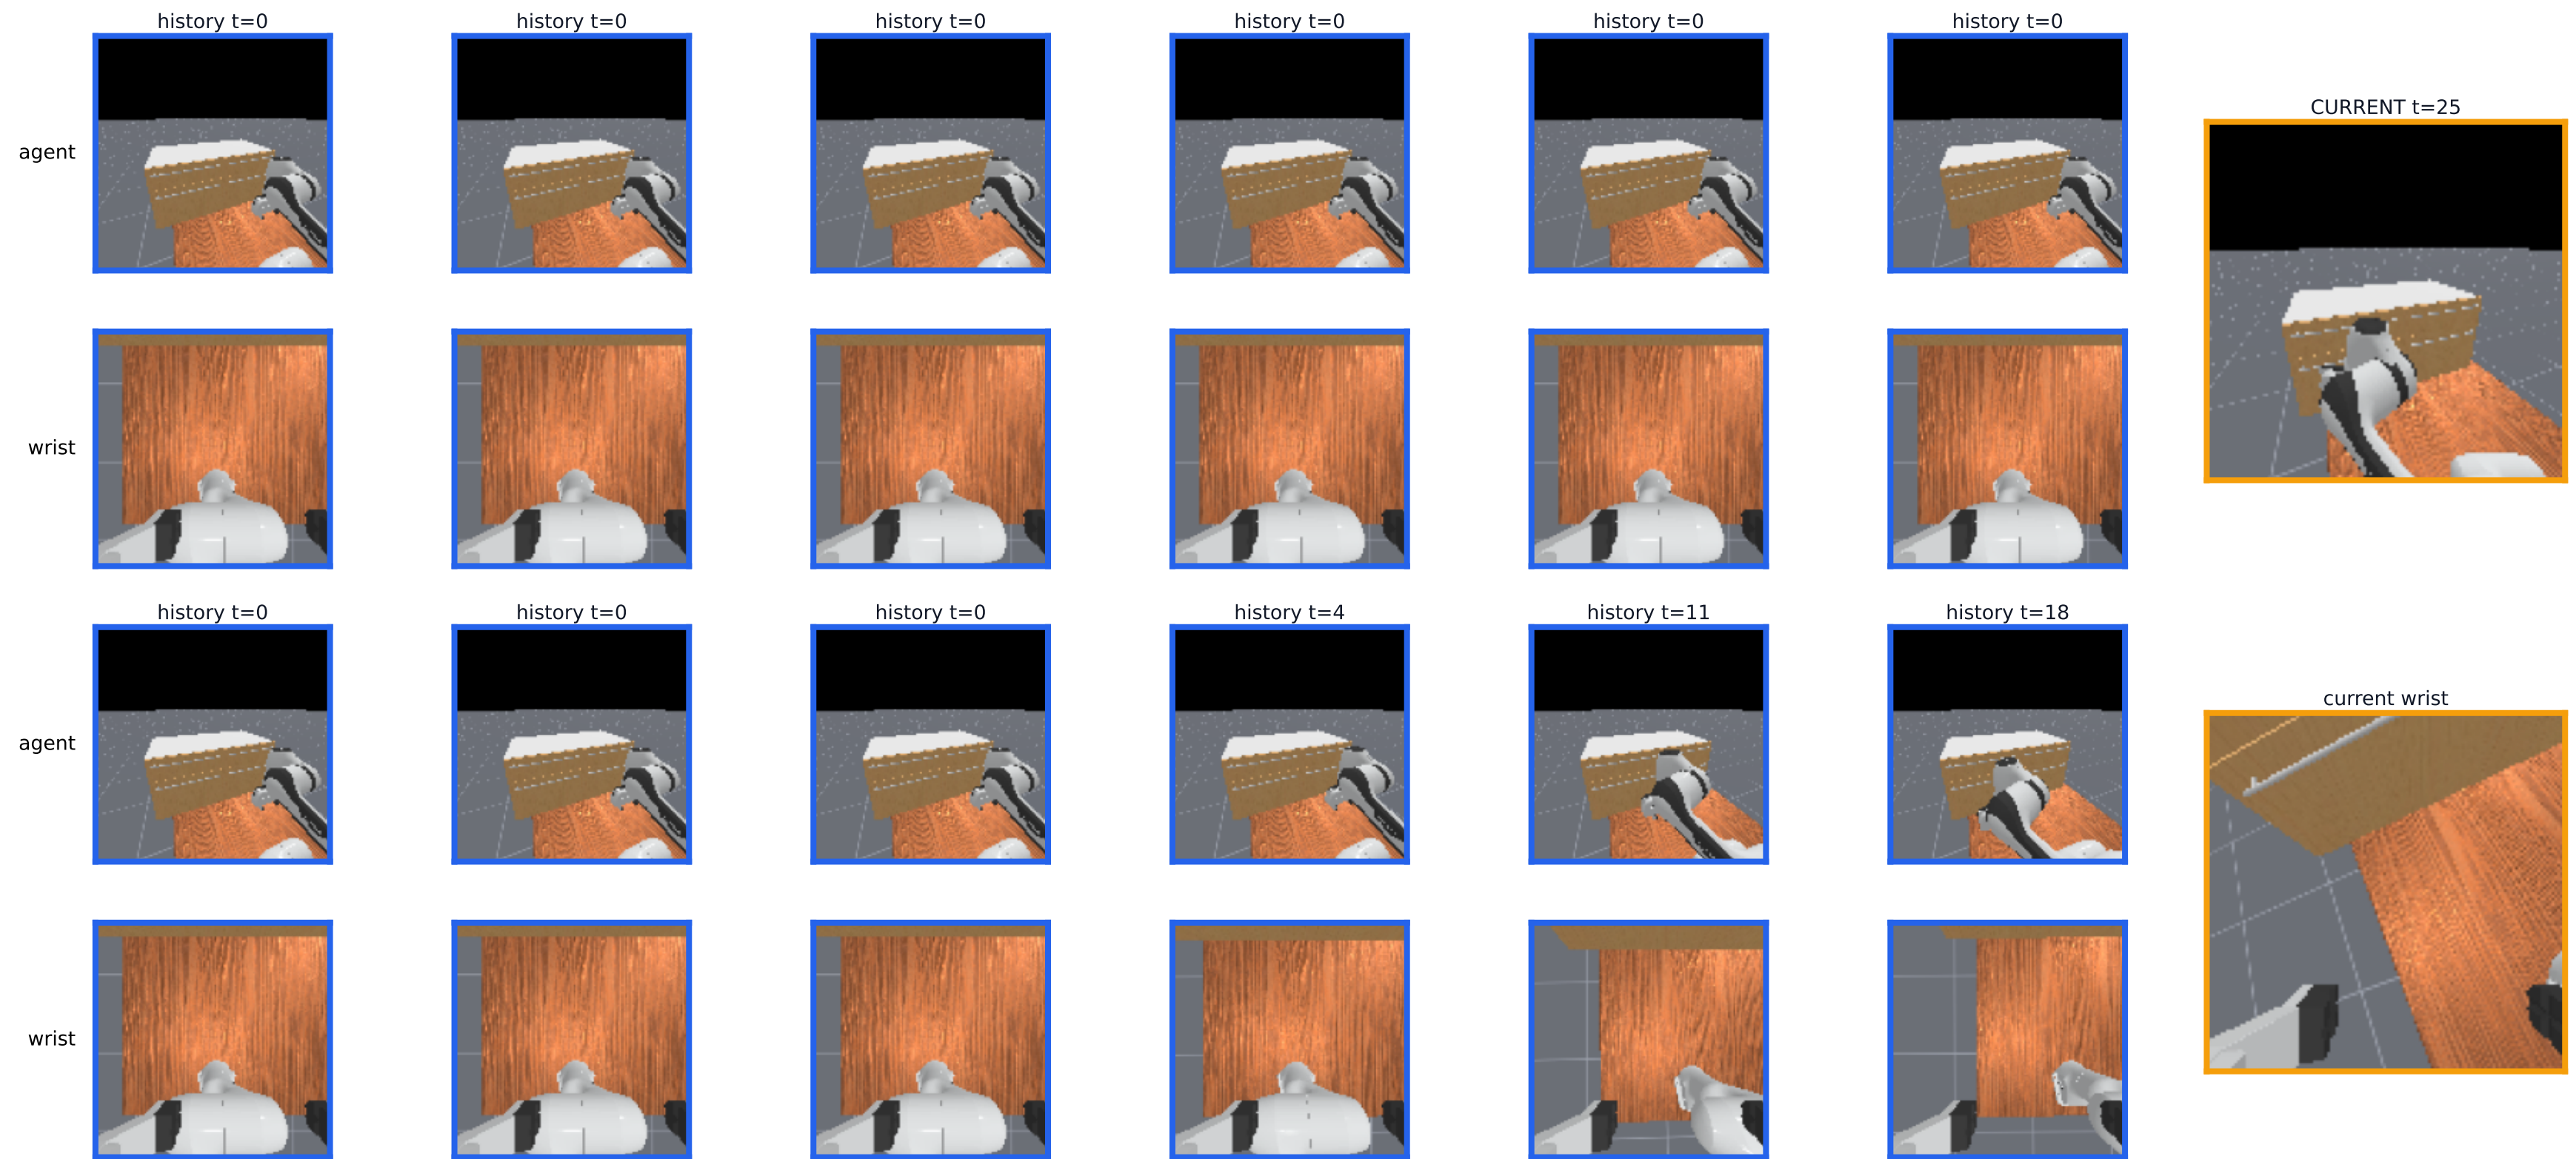

History observation Current observation

Policy queries occur at $t=0, 25, 50, \dots, 450$.

History during drawer opening — POLICY QUERY t=25

hist_length=12, stride=7 → frames 0-18 sampled every 7 steps; current observation t=25; success at t=467. A new 25-action chunk is generated from this input.

 History observation  Current observation

Policy queries occur at t=0,25,50,...,450.

History during drawer opening — POLICY QUERY t=50

hist_length=12, stride=7 → frames 0-43 sampled every 7 steps; current observation t=50; success at t=467. A new 25-action chunk is generated from this input.

 History observation  Current observation

Policy queries occur at t=0,25,50,...,450.

History during drawer opening — POLICY QUERY t=75

hist_length=12, stride=7 → frames 0-68 sampled every 7 steps; current observation t=75; success at t=467. A new 25-action chunk is generated from this input.

 History observation  Current observation

Policy queries occur at t=0,25,50,...,450.

History during drawer opening — POLICY QUERY t=100

hist_length=12, stride=7 → frames 16-93 sampled every 7 steps; current observation t=100; success at t=467. A new 25-action chunk is generated from this input.

 History observation  Current observation

Policy queries occur at t=0,25,50,...,450.

History during drawer opening — POLICY QUERY t=125

hist_length=12, stride=7 → frames 41-118 sampled every 7 steps; current observation t=125; success at t=467. A new 25-action chunk is generated from this input.

 History observation  Current observation

Policy queries occur at t=0,25,50,...,450.

History during drawer opening — POLICY QUERY t=150

hist_length=12, stride=7 → frames 66-143 sampled every 7 steps; current observation t=150; success at t=467. A new 25-action chunk is generated from this input.

 History observation  Current observation

Policy queries occur at t=0,25,50,...,450.

History during drawer opening — POLICY QUERY t=175

hist_length=12, stride=7 → frames 91-168 sampled every 7 steps; current observation t=175; success at t=467. A new 25-action chunk is generated from this input.

 History observation  Current observation

Policy queries occur at t=0,25,50,...,450.

History during drawer opening — POLICY QUERY t=200

hist_length=12, stride=7 → frames 116-193 sampled every 7 steps; current observation t=200; success at t=467. A new 25-action chunk is generated from this input.

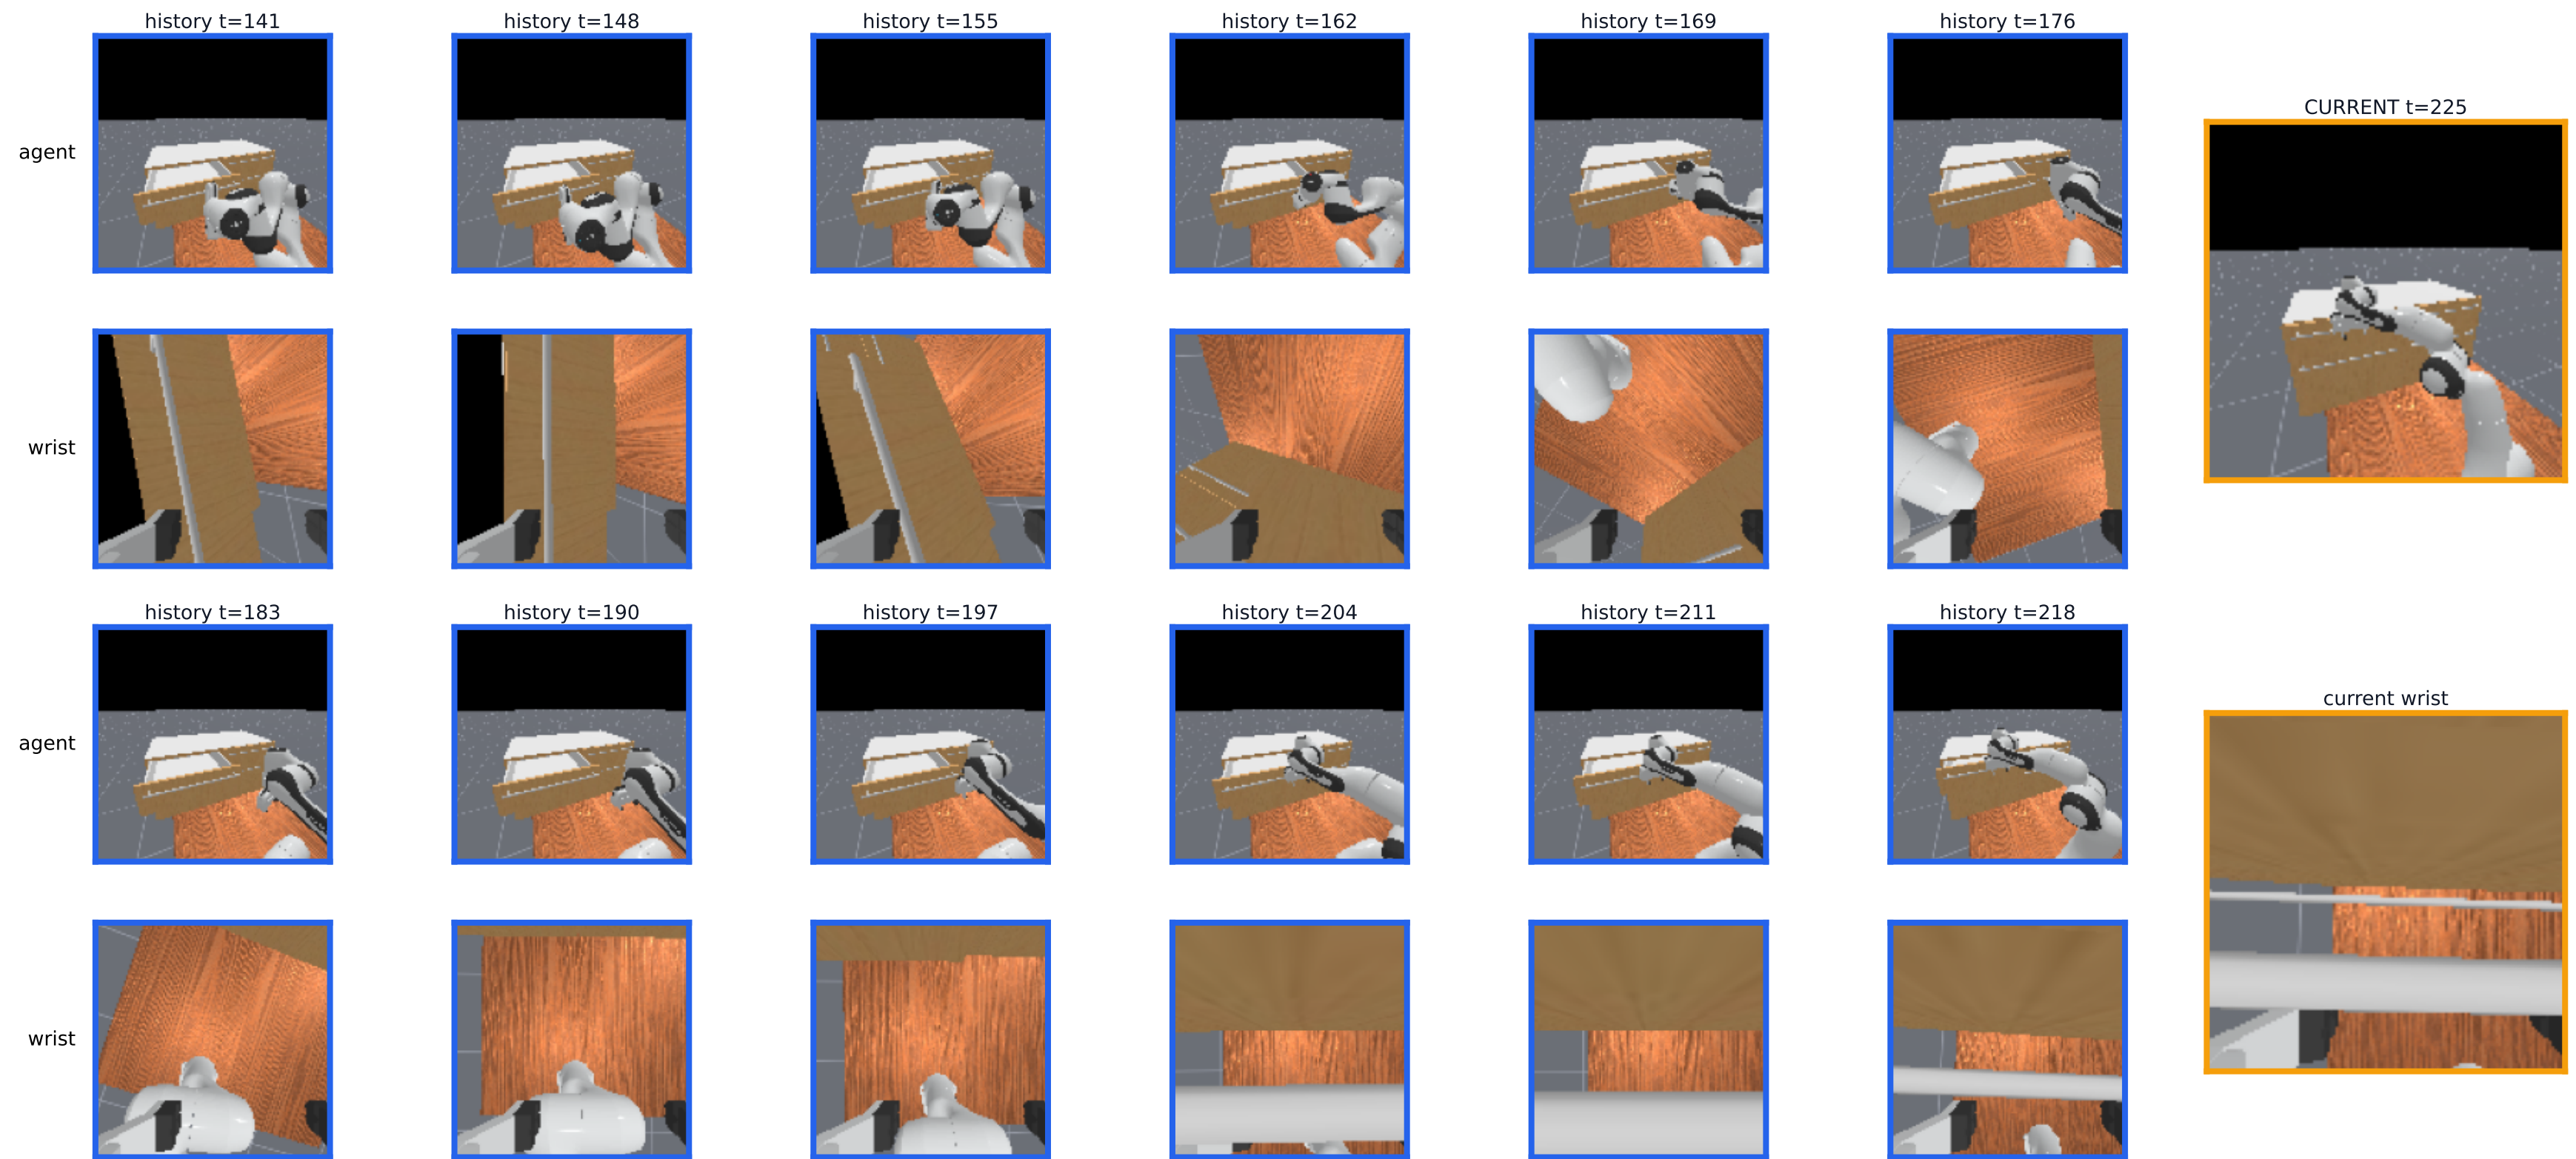

History observation Current observation

Policy queries occur at t=0,25,50,...,450.

History during drawer opening — POLICY QUERY t=225

hist_length=12, stride=7 → frames 141-218 sampled every 7 steps; current observation t=225; success at t=467. A new 25-action chunk is generated from this input.

 History observation  Current observation

Policy queries occur at t=0,25,50,...,450.

History during drawer opening — POLICY QUERY t=250

hist_length=12, stride=7 → frames 166-243 sampled every 7 steps; current observation t=250; success at t=467. A new 25-action chunk is generated from this input.

 History observation  Current observation

Policy queries occur at t=0,25,50,...,450.

History during drawer opening — POLICY QUERY t=275

hist_length=12, stride=7 → frames 191-268 sampled every 7 steps; current observation t=275; success at t=467. A new 25-action chunk is generated from this input.

 History observation  Current observation

Policy queries occur at t=0,25,50,...,450.

History during drawer opening — POLICY QUERY t=300

hist_length=12, stride=7 → frames 216-293 sampled every 7 steps; current observation t=300; success at t=467. A new 25-action chunk is generated from this input.

 History observation  Current observation

Policy queries occur at t=0,25,50,...,450.

History during drawer opening — POLICY QUERY t=325

hist_length=12, stride=7 → frames 241-318 sampled every 7 steps; current observation t=325; success at t=467. A new 25-action chunk is generated from this input.

 History observation  Current observation

Policy queries occur at t=0,25,50,...,450.

History during drawer opening — POLICY QUERY t=350

hist_length=12, stride=7 → frames 266-343 sampled every 7 steps; current observation t=350; success at t=467. A new 25-action chunk is generated from this input.

 History observation  Current observation

Policy queries occur at t=0,25,50,...,450.

History during drawer opening — POLICY QUERY t=375

hist_length=12, stride=7 → frames 291-368 sampled every 7 steps; current observation t=375; success at t=467. A new 25-action chunk is generated from this input.

 History observation  Current observation

Policy queries occur at t=0,25,50,...,450.

History during drawer opening — POLICY QUERY t=400

hist_length=12, stride=7 → frames 316-393 sampled every 7 steps; current observation t=400; success at t=467. A new 25-action chunk is generated from this input.

 History observation  Current observation

Policy queries occur at t=0,25,50,...,450.

History during drawer opening — POLICY QUERY t=425

hist_length=12, stride=7 → frames 341-418 sampled every 7 steps; current observation t=425; success at t=467. A new 25-action chunk is generated from this input.

 History observation  Current observation

Policy queries occur at t=0,25,50,...,450.

History during drawer opening — DIAGNOSTIC SNAPSHOT t=430

hist_length=12, stride=7 → frames 346–423 sampled every 7 steps; current observation t=430; success at t=467. The policy is not queried here; this state occurs inside a previously generated 25-action chunk.

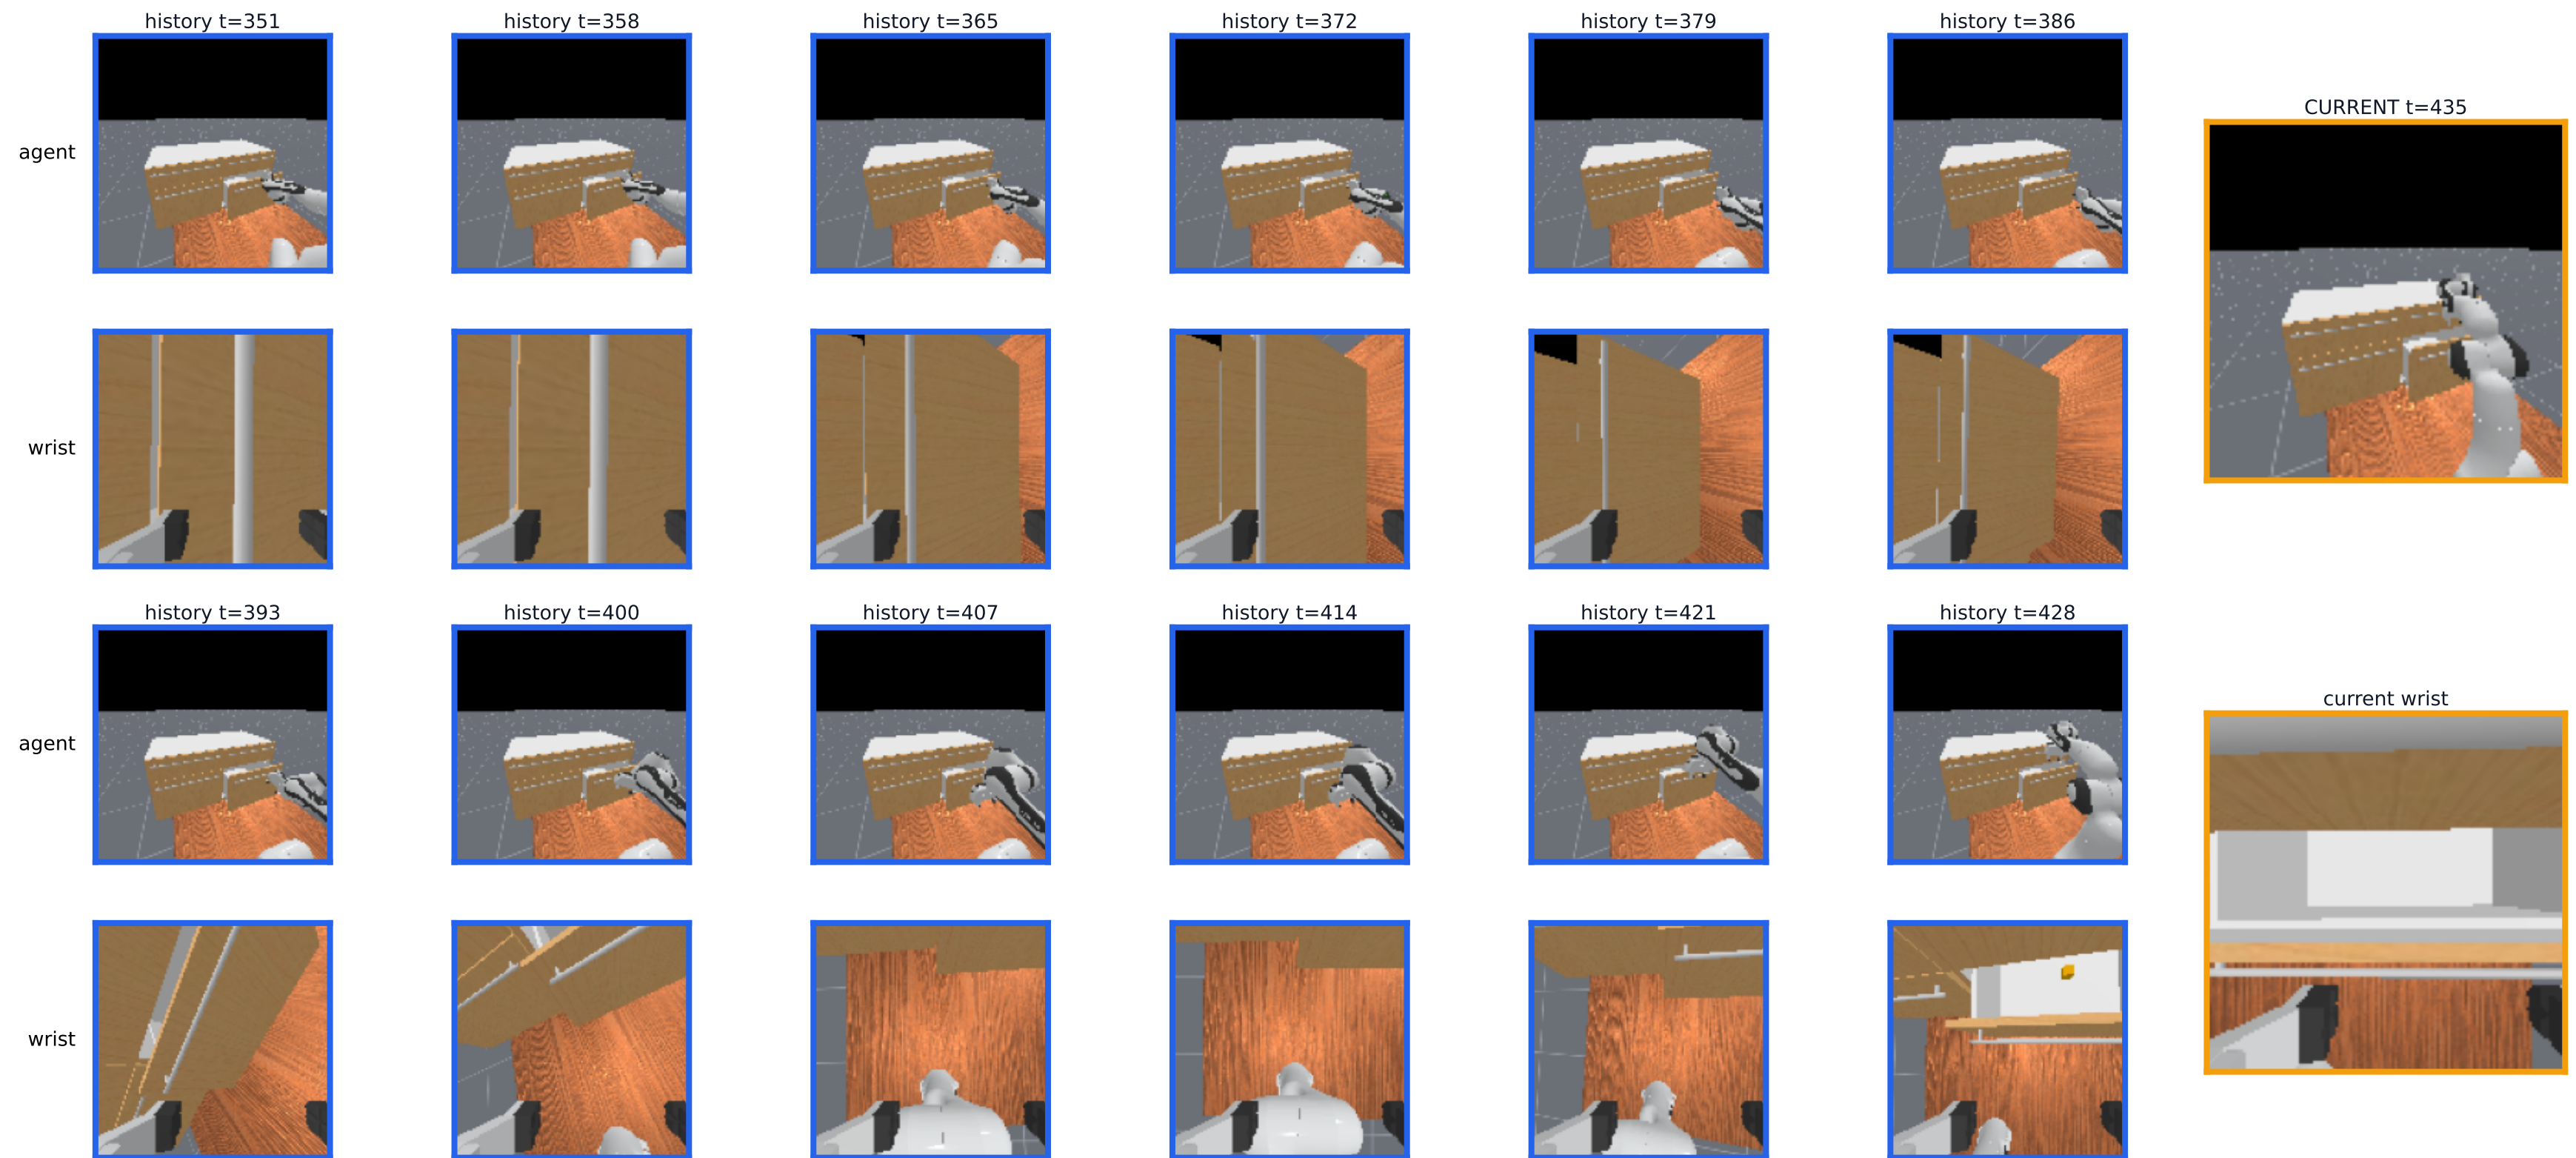

History observation Current observation

Policy queries occur at t=0,25,50,...,450.

History during drawer opening — DIAGNOSTIC SNAPSHOT t=435

hist_length=12, stride=7 → frames 351–428 sampled every 7 steps; current observation t=435; success at t=467. The policy is not queried here; this state occurs inside a previously generated 25-action chunk

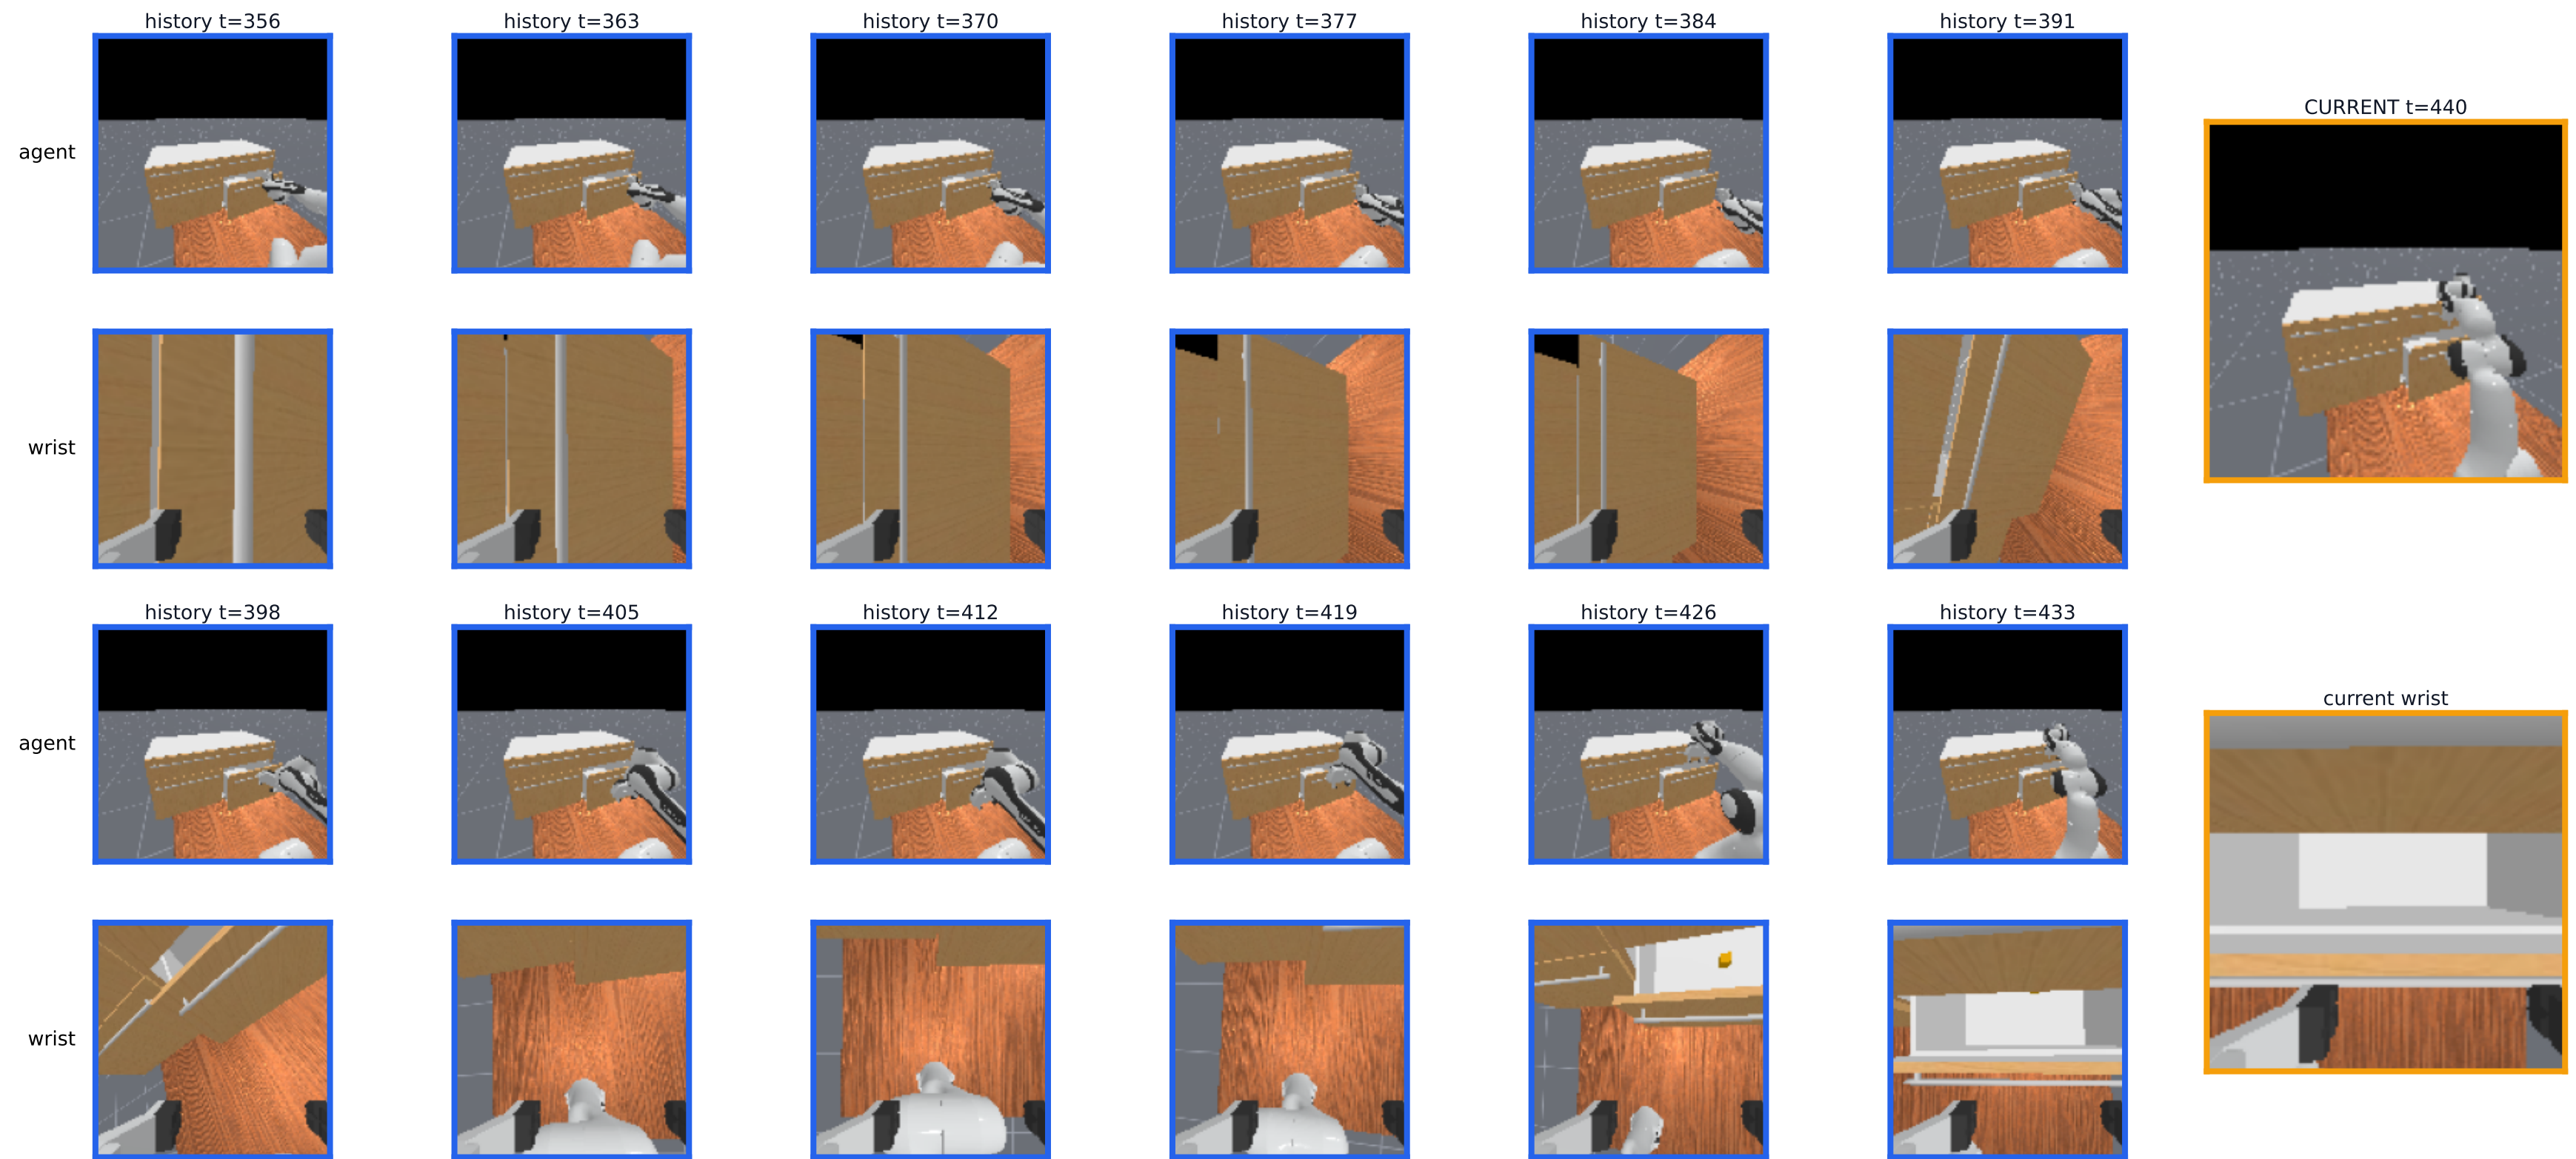

History observation Current observation

Policy queries occur at t=0,25,50,...,450.

History during drawer opening — DIAGNOSTIC SNAPSHOT t=440

hist_length=12, stride=7 → frames 356–433 sampled every 7 steps; current observation t=440; success at t=467. The policy is not queried here; this state occurs inside a previously generated 25-action chunk

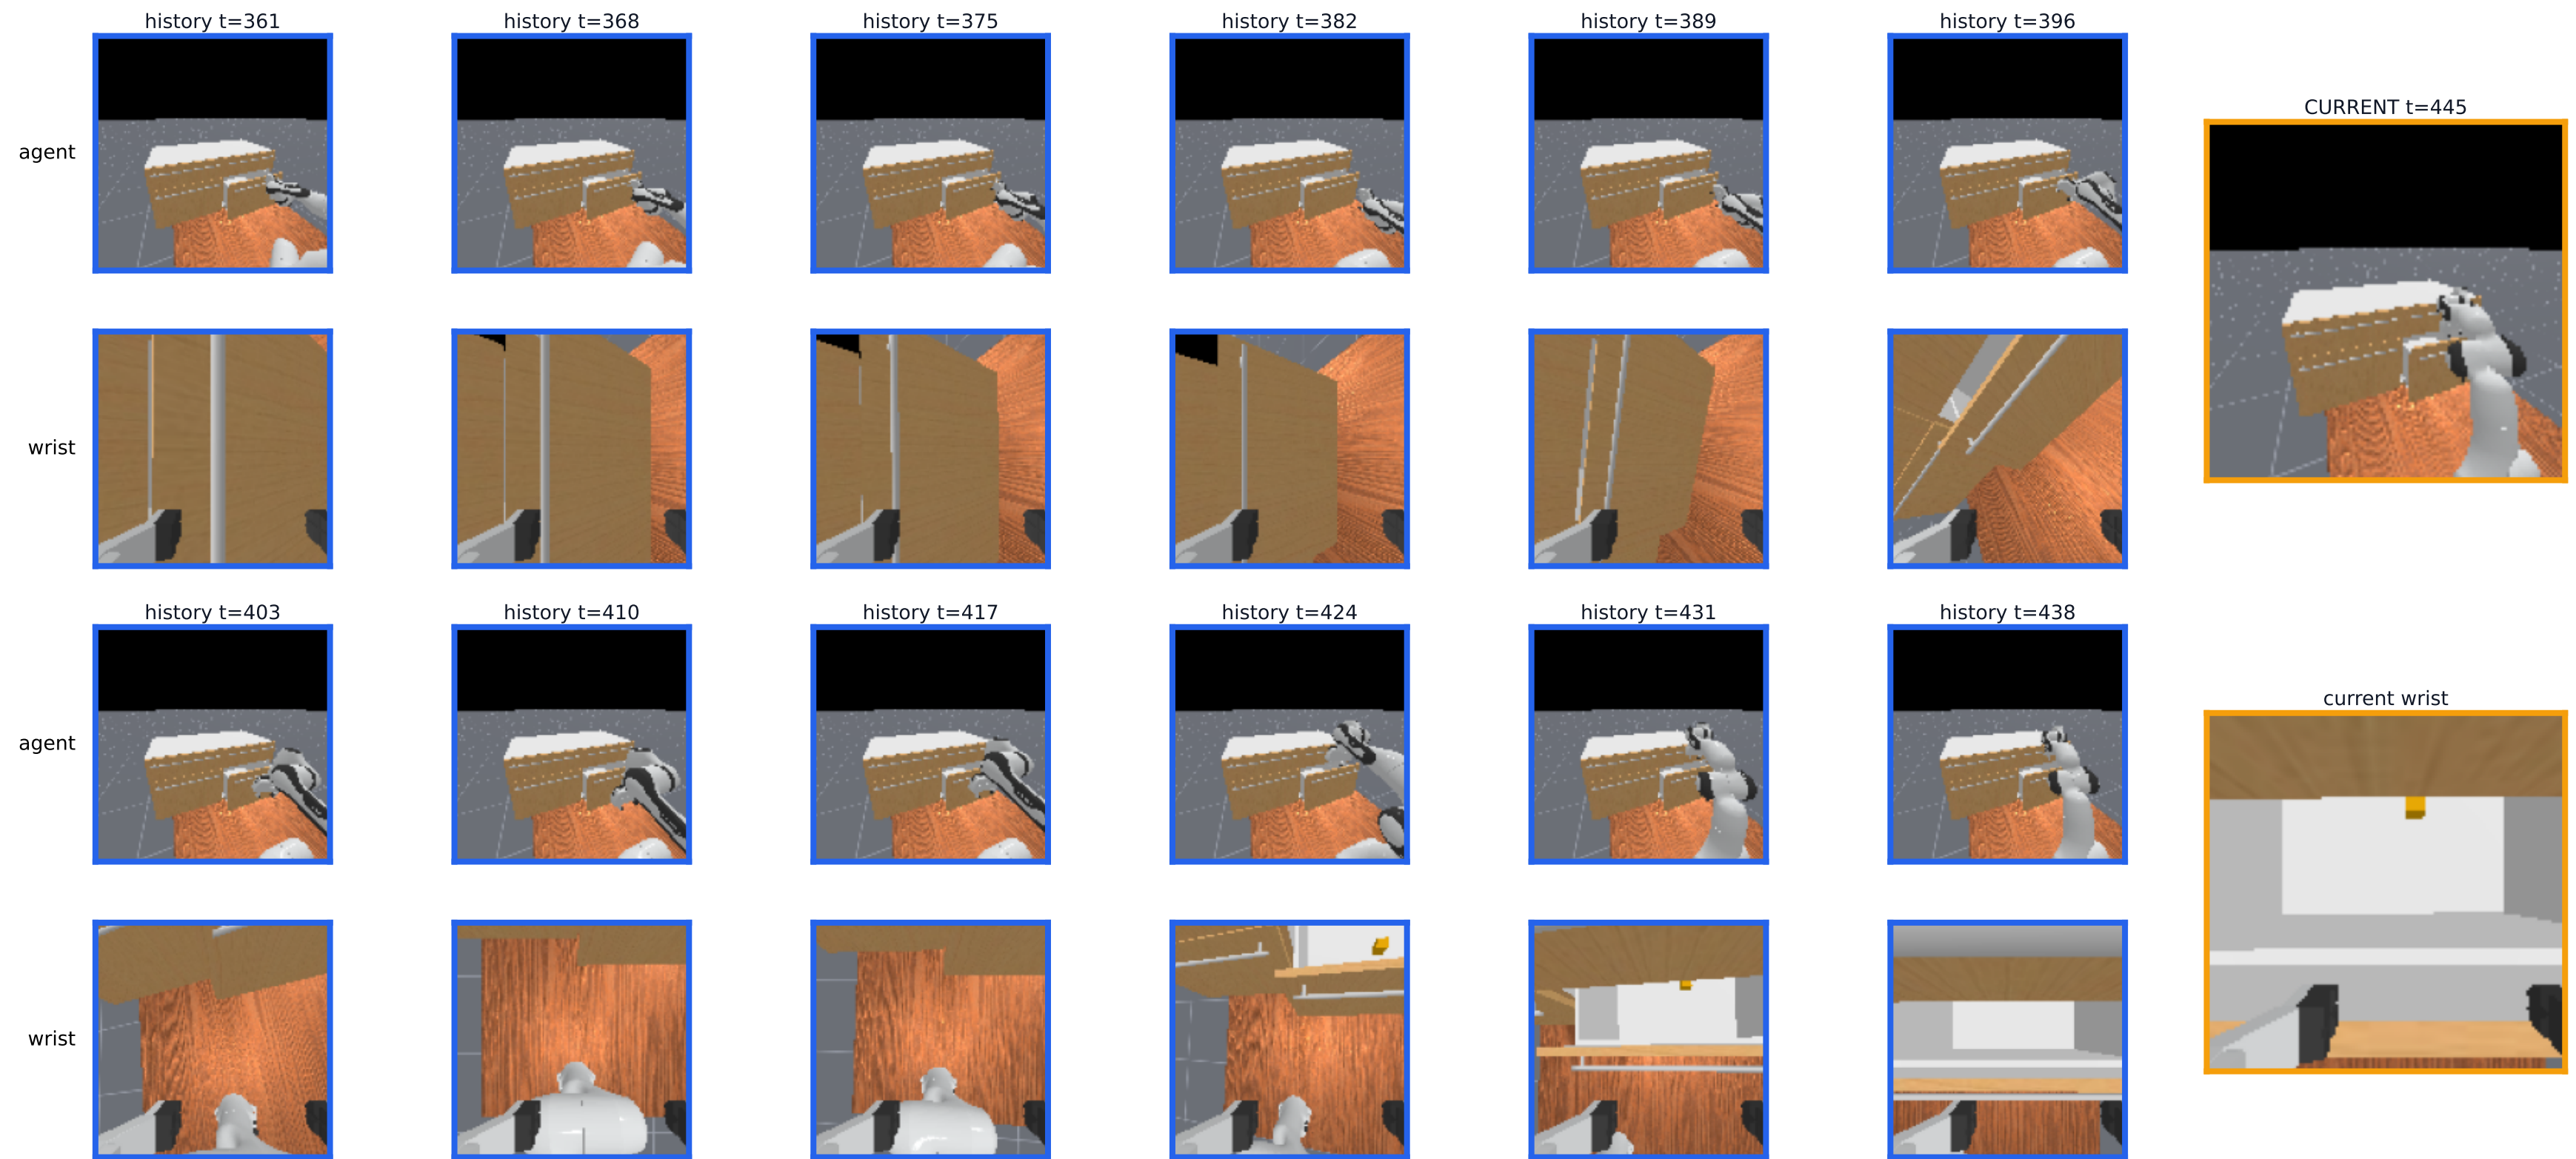

History observation Current observation

Policy queries occur at t=0,25,50,...,450.

History during drawer opening — DIAGNOSTIC SNAPSHOT t=445

hist_length=12, stride=7 → frames 361-438 sampled every 7 steps; current observation t=445; success at t=467. The policy is not queried here; this state occurs inside a previously generated 25-action chunk

 History observation  Current observation

Policy queries occur at t=0,25,50,...,450.

History during drawer opening — POLICY QUERY t=450

hist_length=12, stride=7 → frames 366–443 sampled every 7 steps; current observation t=450; success at t=467. A new 25-action chunk is generated from this input.

 History observation  Current observation

Policy queries occur at t=0,25,50,...,450.

History during drawer opening — DIAGNOSTIC SNAPSHOT t=455

hist_length=12, stride=7 → frames 371-448 sampled every 7 steps; current observation t=455; success at t=467. The policy is not queried here; this state occurs inside a previously generated 25-action chunk

 History observation  Current observation

Policy queries occur at t=0,25,50,...,450.

History during drawer opening – DIAGNOSTIC SNAPSHOT t=460

hist_length=12, stride=7 → frames 376-453 sampled every 7 steps; current observation t=460; success at t=467. The policy is not queried here; this state occurs inside a previously generated 25-action chunk.

 History observation Current observation

Policy queries occur at $t=0, 25, 50, \dots, 450$.

History during drawer opening — DIAGNOSTIC SNAPSHOT t=465

hist_length=12, stride=7 → frames 381-458 sampled every 7 steps; current observation t=465; success at t=467. The policy is not queried here; this state occurs inside a previously generated 25-action chunk

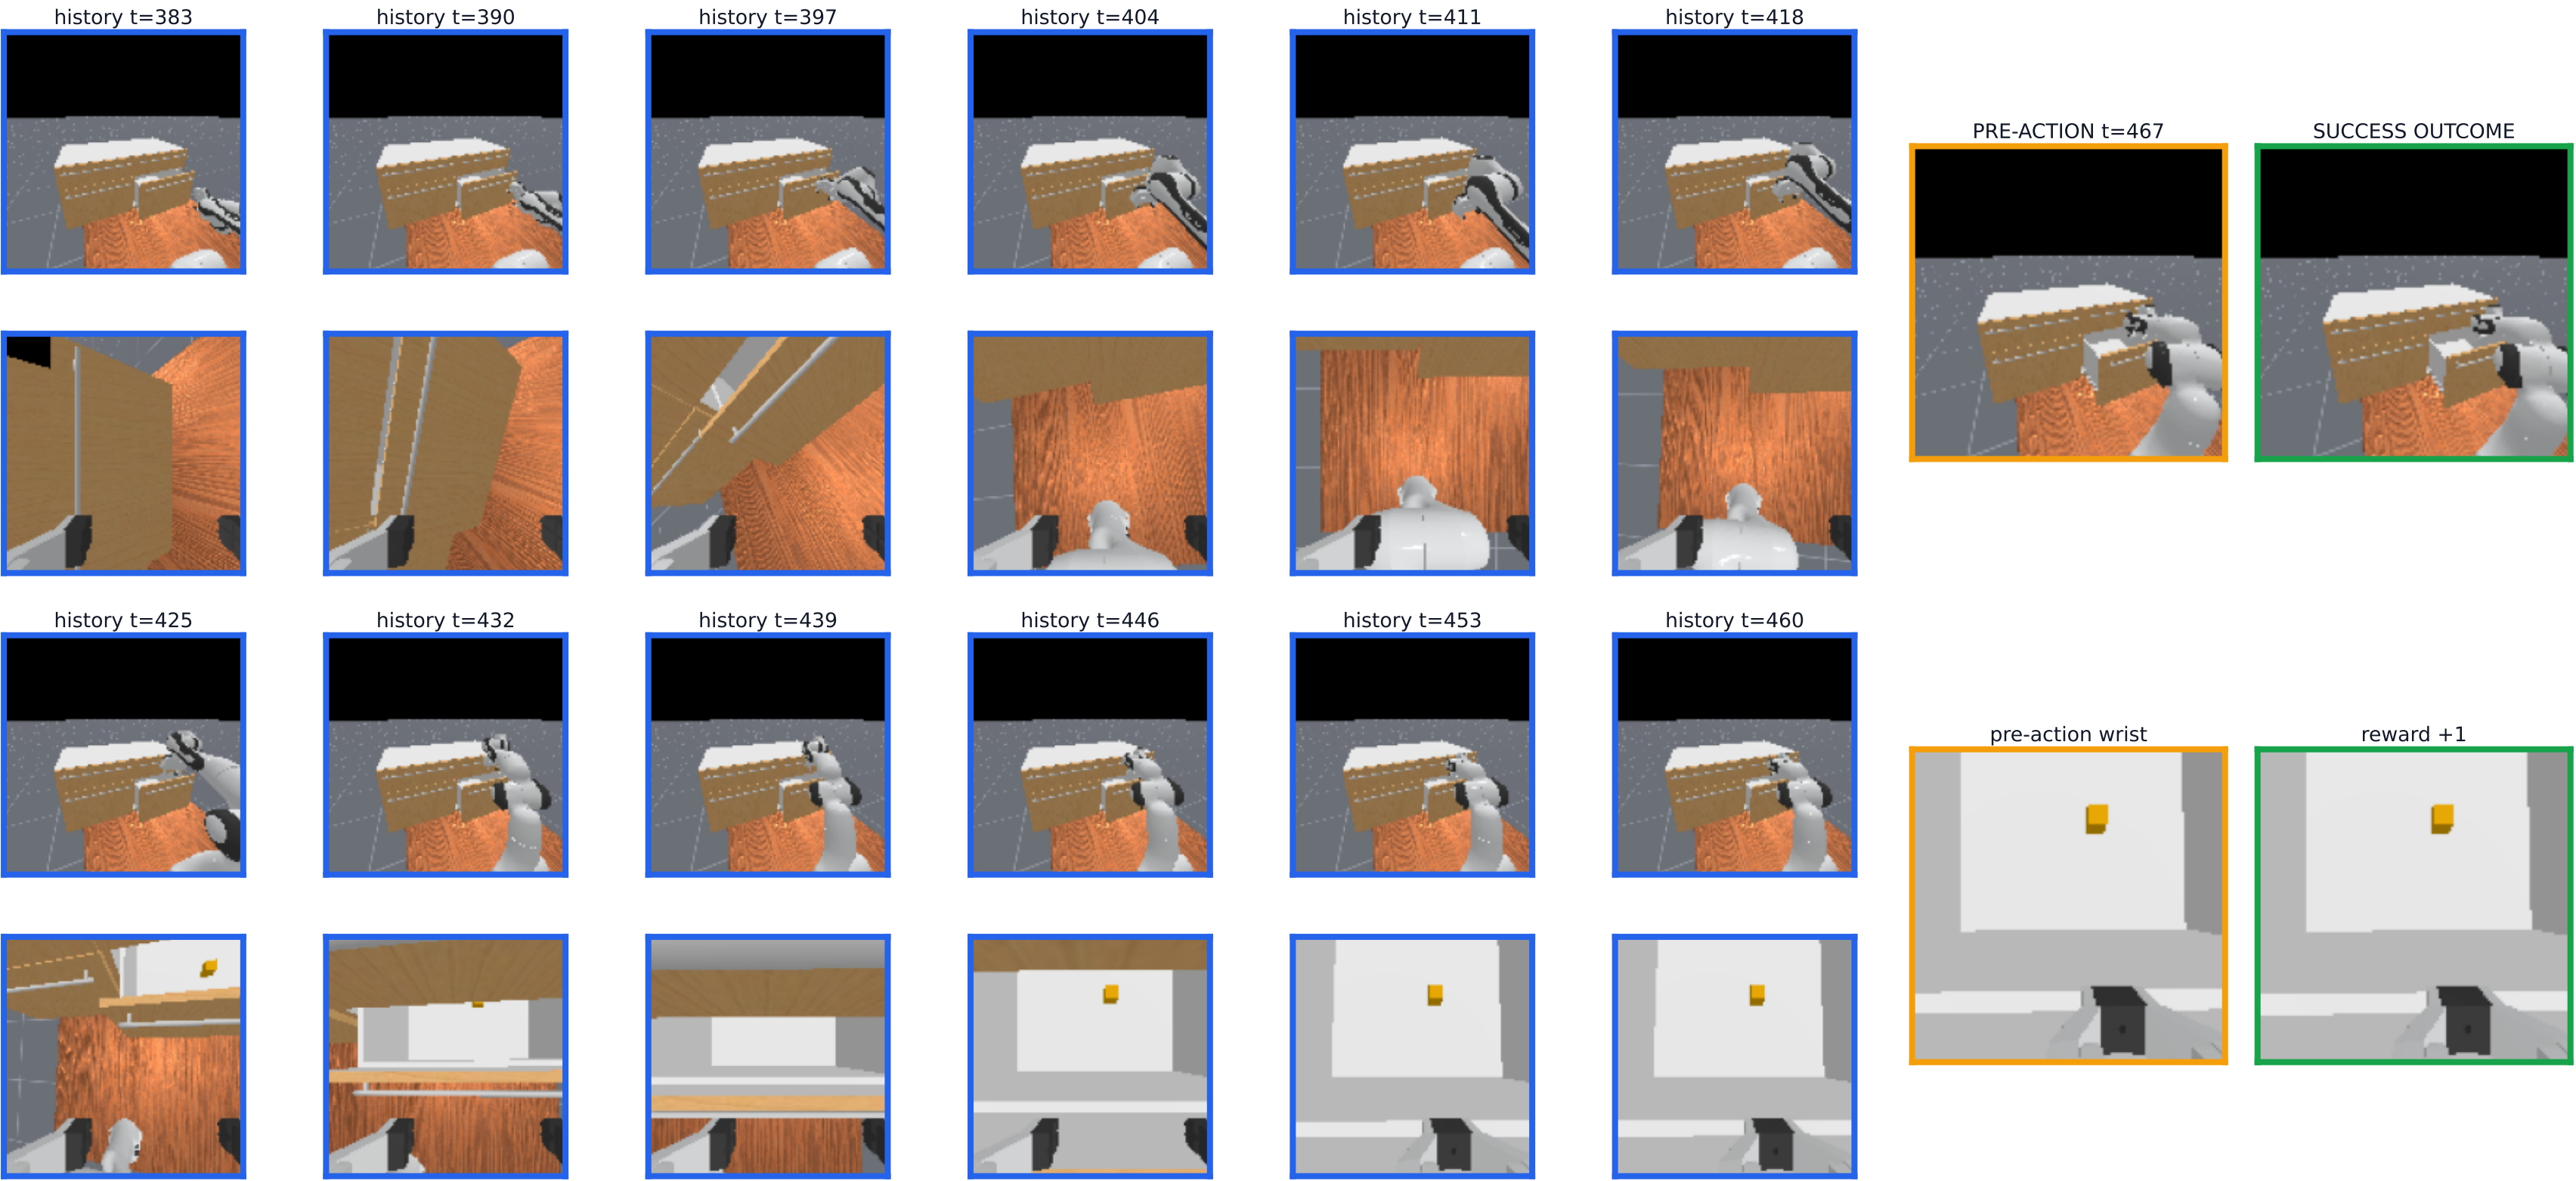

History observation Current observation

Policy queries occur at t=0,25,50,...,450.

Terminal success transition — t=467

Diagnostic reconstruction with hist_length=12, stride=7. The policy was last queried at t=450; t=467 is inside that open-loop action chunk.

 History observation Pre-action observation Post-action success
