

Physical-frame sequence around drawer opening

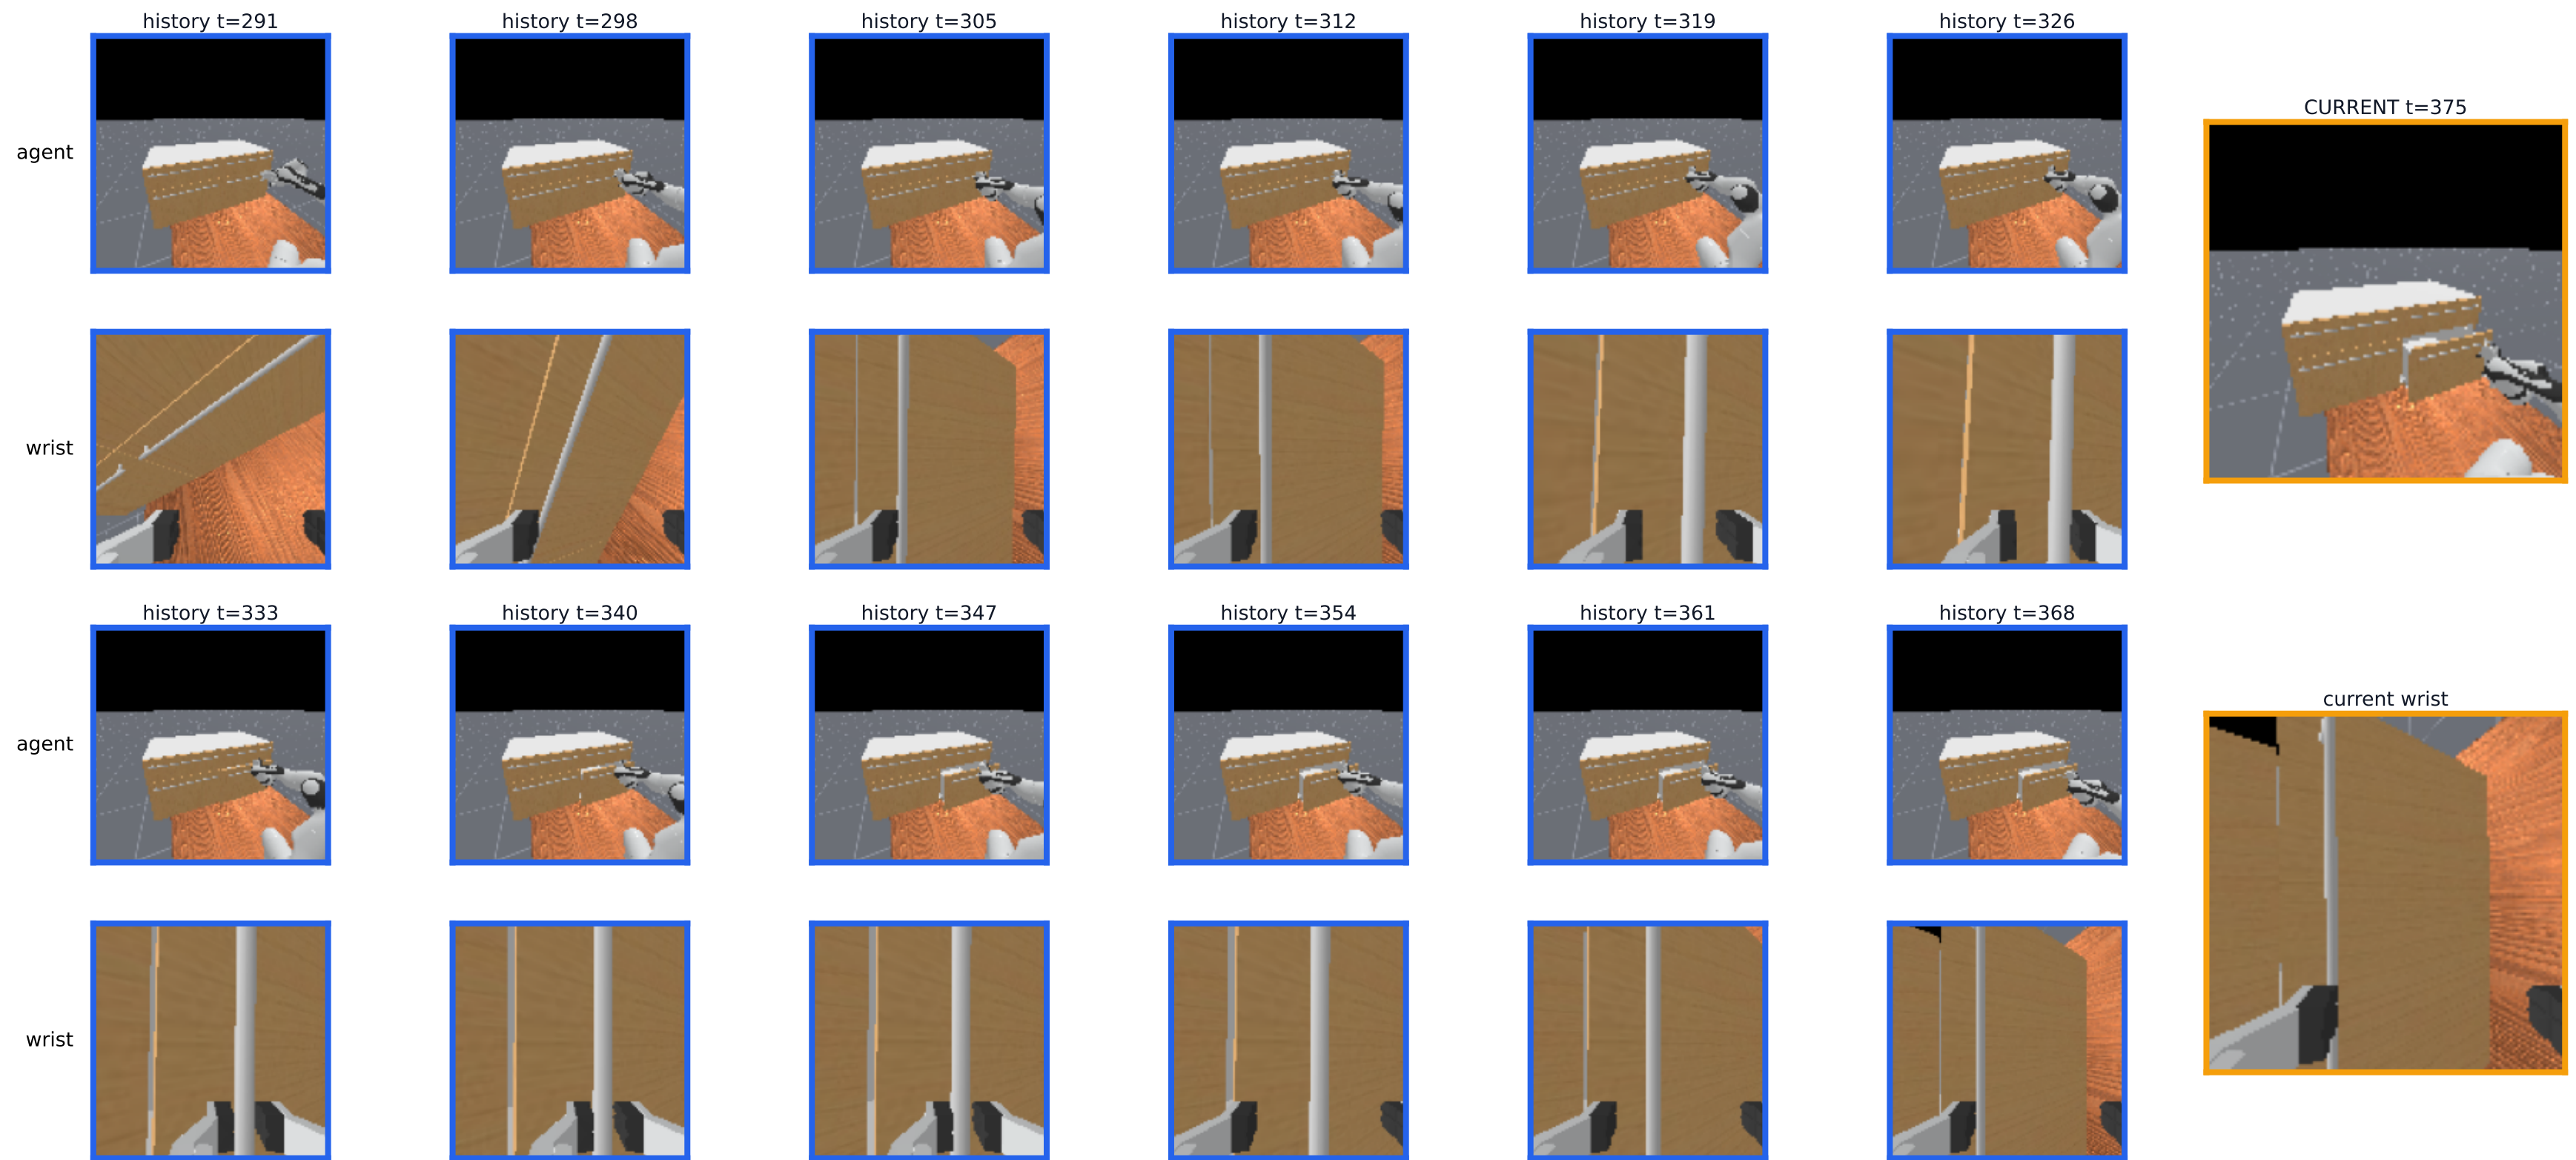

Successful dataset episode ep_00100 · frames sampled every 5 physical steps · agent view above wrist view

This page shows the stored trajectory continuously; blue history selection is shown on following pages.

Policy history during drawer opening — execution t=375

hist_length=12, stride=7 → frames 291-368 sampled every 7 steps; current observation t=375; success at t=467

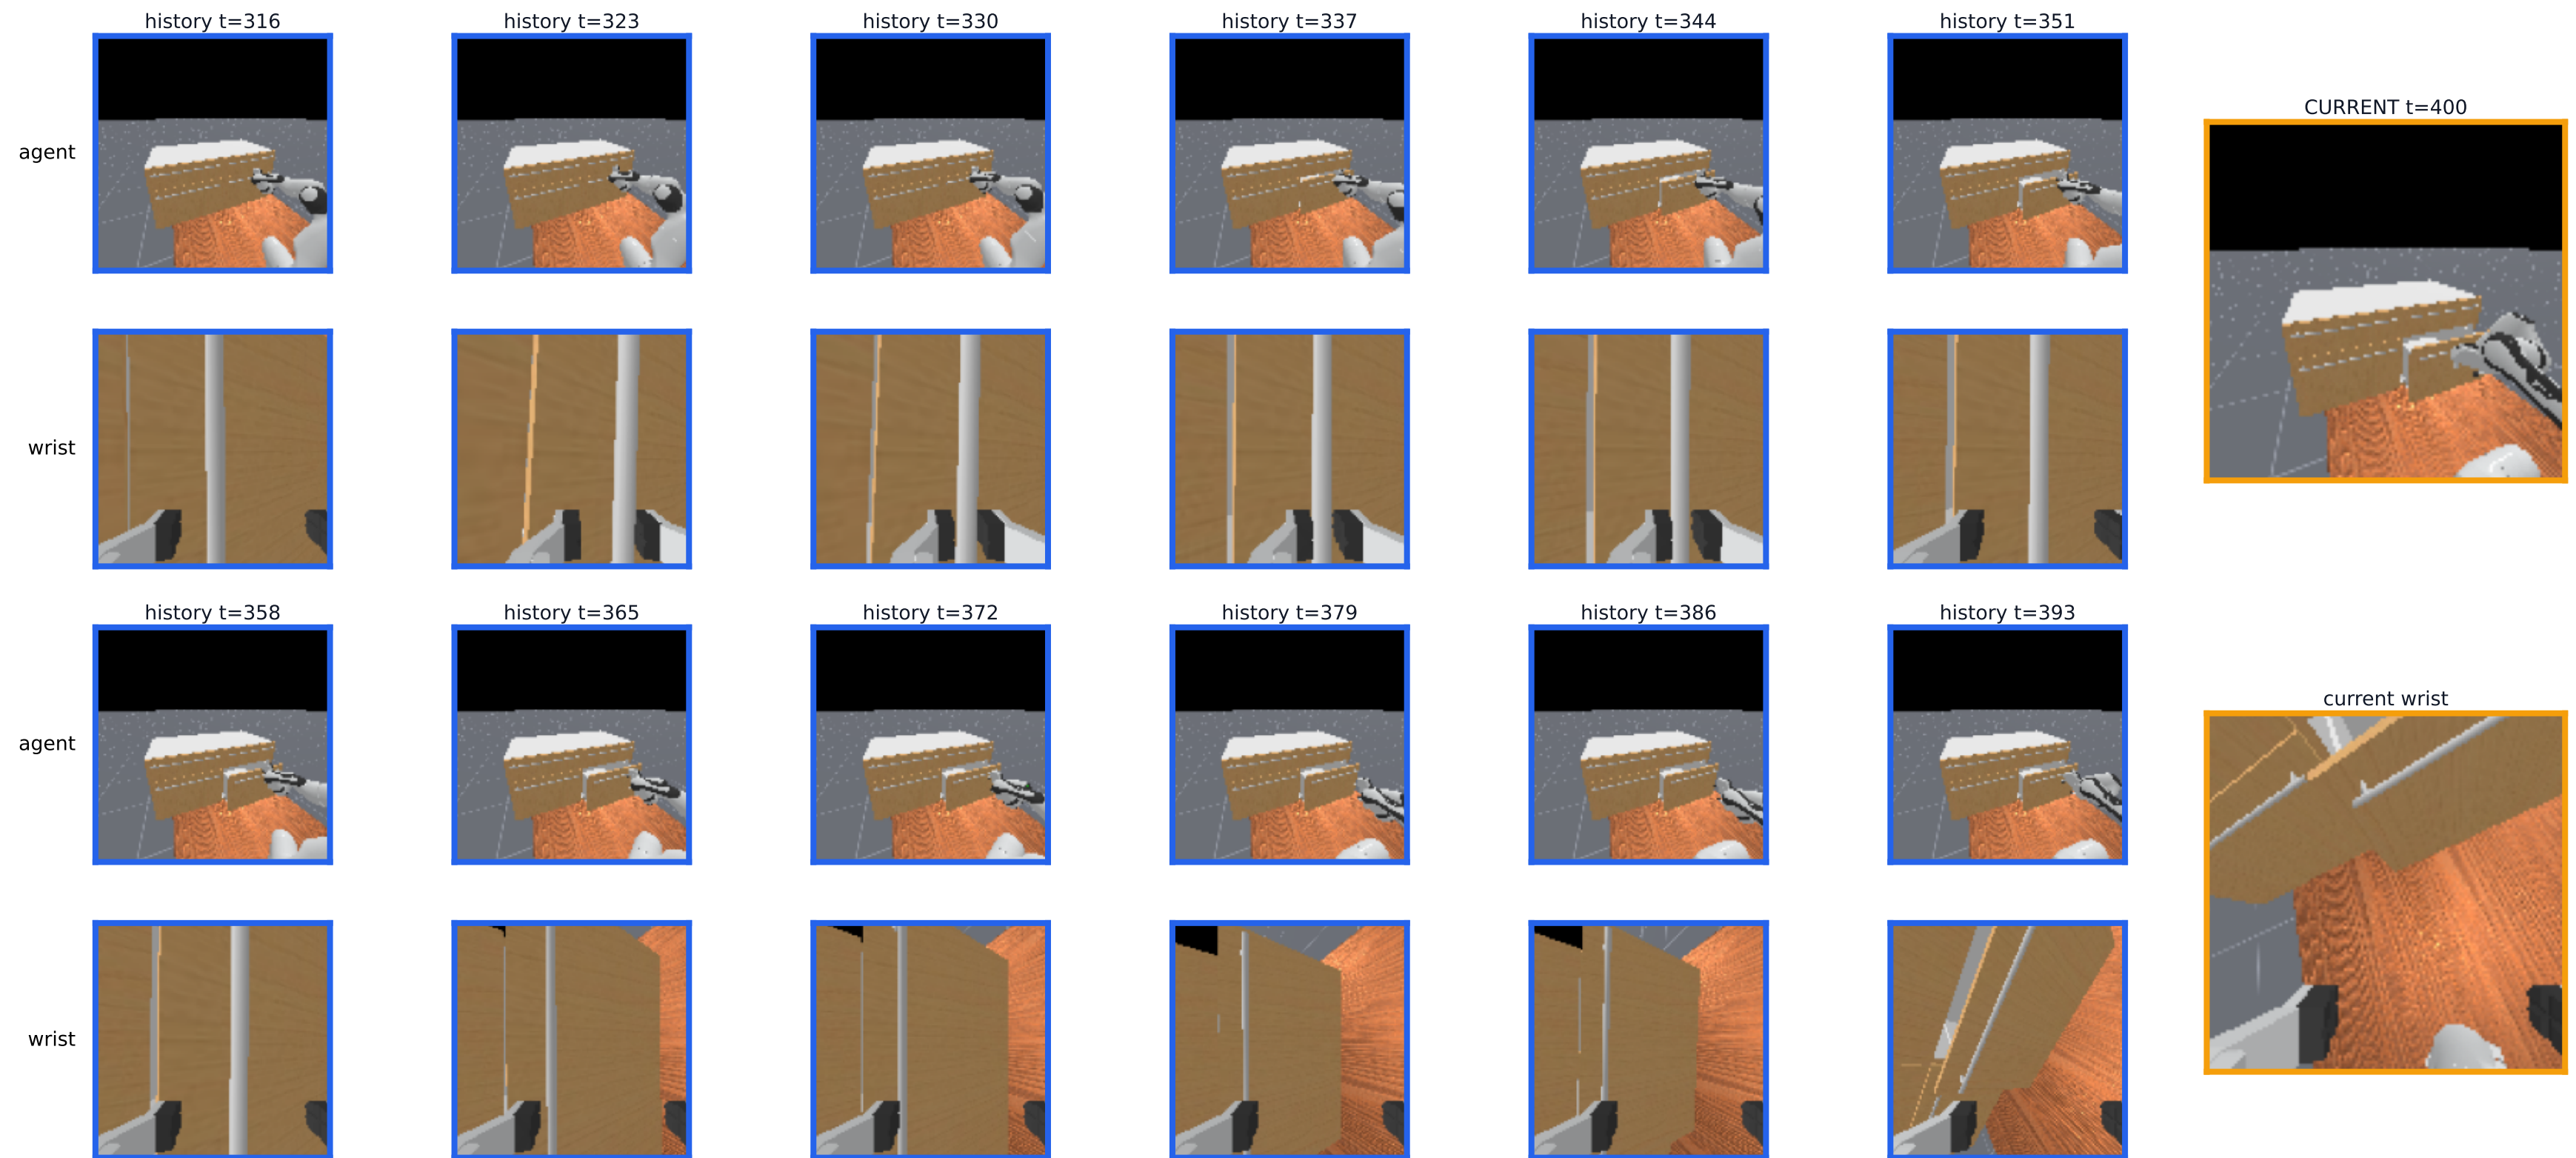

History observation Current observation

The next policy query is 25 physical steps later.

Policy history during drawer opening — execution t=400

hist_length=12, stride=7 → frames 316-393 sampled every 7 steps; current observation t=400; success at t=467

 History observation  Current observation

The next policy query is 25 physical steps later.

Policy history during drawer opening — execution t=425

hist_length=12, stride=7 → frames 341-418 sampled every 7 steps; current observation t=425; success at t=467

 History observation  Current observation

The next policy query is 25 physical steps later.

Policy history during drawer opening — execution t=450

hist_length=12, stride=7 → frames 366-443 sampled every 7 steps; current observation t=450; success at t=467

 History observation  Current observation

The next policy query is 25 physical steps later.

Terminal success transition — t=467

Diagnostic reconstruction with hist_length=12, stride=7. The policy was last queried at t=450; t=467 is inside that open-loop action chunk.

 History observation Pre-action observation Post-action success
